

The information in the air transport databases is updated daily from many different sources including international organisations, airports and airlines. In order to increase its scope and its reliability, ENAC also carries out annual surveys of airports and airlines.

Data can be supplied electronically on request.

“Airlines” database

ENAC’s “Airlines” database contains detailed information on 600 airlines, including around 160 in the U.S., about 200 in Europe and 140 in Asia. The different sources used* to constitute this database are mostly IATA and ICAO, as well as professional publications such as Airline Monitor, Airline Business and Airclains, but also ENAC’s own surveys.

For each operator, nearly 500 items are regularly collected and collated by main theme in several files.

The main file contains background qualitative and quantitative information on each airline (name and address...) at the time of consultation, with the other eight files presenting its results and its fleet structure for the last known period but also over previous years. The files, their contents and the periodicity of their updates are detailed in the following pages.

**and indicated in the files*

The image displays a collage of several overlapping spreadsheets from the ENAC Airlines database. The spreadsheets are organized into columns and rows, containing various data points for different airlines. The ENAC logo is visible at the top of the documents. The data includes airline names, IATA codes, ICAO codes, and other operational and fleet-related information. The spreadsheets are arranged in a way that shows multiple pages of the database, illustrating the extensive data collected for each operator.

background information

(qualitative and quantitative)

- Name and address of the airline
- Identity of senior executives
- Shareholders
- Subsidiaries
- Network
- Timeframe
- Maintenance
- Destinations
- etc.

Updated
quarterly

Alliances (by airline and by partner)

Timeframe: since 1995

- Nature of the alliance
- Date of formation
- Cross-shareholdings
- etc.

Updated
yearly

Traffic results, finances and workforce

— Overview

Timeframe: since 1980*

- Traffic (passenger, revenue passenger-km, available seat-kilometres, ...)
- Finances (operating revenues, operating costs, net results...)
- Workforce (cockpit crew, cabin crew, ground personnel)

* split between domestic and international traffic since 1996.

Updated
quarterly

Detailed financial results

Timeframe: since 1990

More than 100 financial variables presenting the budget items and the profit and loss account in accordance with ICAO rules

Updated
yearly

Fleet by aircraft

Timeframe: since 1986

Aircraft type
Registration number
Date of manufacture
Delivery date
Manufacturer's Serial Number (MSN)
etc.

Updated
yearly

Fleet utilisation

Timeframe: since 1980 for ENAC surveys, and since 1995 for IATA data

Yearly block-to-block and airborne flight hours per aircraft type
Number of landings per year
Average flight stage
Average yearly utilisation

Updated
yearly

News

Timeframe: since Septembre 1999

Articles published in international press on airlines can be accessed with a keyword search

Updated
continuously

“Airports” database

ENAC’s “Airports” database comprises annual and monthly data on more than 2,700 airports world-wide since 1970*. A variety of sources is used in order to offer wider geographical coverage. An annual survey is carried out across 2,700 airports since 1996.

For each airport in the database, identified by its country code, its city code and its Official Airline Guide code, the following information is available

- Movements**
 - **Total aircraft movements**
 - All-cargo aircraft movements
 - Mixed aircraft movements
 - **International aircraft movements**
 - Domestic aircraft movements, etc.
- Passengers**
 - **Total number of passengers**
 - Local passengers
 - Passengers in transit
 - **Number of international passengers**
 - Number of domestic passengers, etc.
- Cargo**
 - **Tonnes of freight handled**
 - **Tonnes of international freight handled**
 - Tonnes of domestic freight handled
 - **Tonnes of mail handled, etc.**

* Since 1999 for monthly traffic

“Traffic flows” database

The ENAC “Traffic flows” database comprises city-pair and country-pair passenger traffic flows to and from all major cities and countries for every year since 1970. In certain cases, only international traffic data is available.

Numerous sources are used: the airports themselves, the civil aviation authorities or international organisations. Thus, for a given city-pair, several figures from different sources of information may be available (and the source is indicated).

A permanent survey is carried out among major world-wide air transport organisations.

The breakdown between scheduled and non-scheduled traffic is provided whenever available in the original source.

The database comprises around 35,000 traffic flows for each year. For some of them, 2 or 3 different sources of information are available. Moreover, the definition used by each source to count its traffic is also shown in the database.
